

The Challenge: Understanding Your Business

Reporting is one way to understand your business, but how can you collect accurate data from a variety of systems and databases? How can you analyze information across multiple business applications in various departments and geographic locations?

xFusion Studio helps your team make sense of your business data and enables its transformation into valuable information. Better decisions are made from having a more complete picture of accurate and clean business information.

Better Decision-Making

xFusion Studio gives your team a single point from which to access all information across the enterprise. xFusion Insight Packs add out-of-the-box business reports, data quality functions, and process improvement that decrease operational costs and increase data access and control. All of these promote better information management that help you make the best decisions for your business.

Data Clean Up

Not all of your business information is accurate, or correct. At some point the risk of keeping unclean data will jeopardize your company's bottom line. Costly operational mistakes are too often related to unclean, outdated, or mistyped data. Customer relations, financial reporting and overall operations benefit from ongoing improvement of data quality. xFusion Studio gives your team the ability to find and correct problem areas of your CRM or ERP systems.

Synchronize Business Departments

- Are your salespeople calling on customers who have open customer support problems?
- Is new inventory being ordered after it has been discontinued?
- Why is accounting billing customers who have already paid?

xFusion Studio connects your business so that you are no longer limited by "islands of information."

Sharing information across departments and outside offices can be easier than you think. Don't limit your view of information to the department-level. xFusion Studio removes barriers to sharing important business information.

Industry Expertise

Your company benefits from industry-leading solutions. Software Labs has been the preferred supplier of data integration and conversion software since its inception in 2004. We build the best software backed by the most industry knowledge, and customers continue to choose our solutions over all the competitors.
