

Maintain Mobile Productivity with xFusion Mobile Solution

By Jessica Kostek - TMCnet Channel Editor

November 5, 2008

Staying connected, no matter where you are is a major push for all major corporations who are trying to stay secure, stable and afloat in today's teetering market. With various options to choose from, no one solution may work for the company's individual needs. Now, another solution has appeared as an option.

Software Labs, provider of advanced data management solutions, introduced its xFusion Mobile Solution. The xFusion delivers secure access to business information using a web browser or an Internet device like a mobile phone.

The xFusion Mobile Solution includes:

- * xFusion WebDB Server -- remote access to business data using Web Services
- * xFusion Studio -- for custom data management
- * Training and Technical Support

"Software Labs is very excited about xFusion Mobile Solution because mobile technologies for the business are in high demand," said Pradeep Tapadiya, founder and Chief Executive Officer for Software Labs. "We designed the solution to meet customer demand as the industry trends toward mobility. Companies have unique requirements, and now have a way to deploy a mobile data solution quickly and customize it over time. The solution offers the lowest TCO and high ROI."

The xFusion Mobile Solution also provides out-of-the-box templates for SAP (News - Alert) ERP, SAP All-In-One, and SAP Business One, and is currently available for purchase.

The SAP ERP application, manufactured by SAP AG, is an integrated enterprise resource planning (ERP) software. It is the successor to SAP R/3.

SAP ERP includes four individual solutions that support key functional areas:

- * SAP ERP Financials
- * SAP ERP Human Capital Management
- * SAP ERP Operations
- * SAP ERP Corporate Services
