

Data Integration Solutions for SAP Business One

Reliable and rapid data integration
across business applications

xFusion Studio

Accelerate your Data Integration

SAP Business One partners and customers are creating successful data integration processes using xFusion Studio. Data movement in and out of SAP Business One is a business requirement, and exchanging this data with other business applications in the enterprise is a challenge. xFusion Studio provides an easier way to accomplish these tasks, and is the preferred solution over DTW.

xFusion Studio meets the demand of a rapid-deployment operation, and users can be trained and productive in less than one day. xFusion Studio is best known for its data conversion strengths. More SAP Business One partners are successful with xFusion Studio than any other solution for data migration.

Data integration is a powerful part of the xFusion Studio software. Its data management templates for integration processes deliver out-of-the-box productivity. These help SAP users to build specific processes for moving data across business applications, and are completely customizable.

Our data integration solutions will **make your job much easier**. Gain fast access to the right data, reduce operational bottlenecks, and automate manual processes with one piece of software.

xFusion Studio is the right solution for SAP Business One users.

SAP Success

"xFusion addresses the needs of our partners and customers by expediting migration from legacy systems, and providing efficient methods for integrating SAP Business One into the enterprise," said **Dan Kraus**, vice president for SAP Business One at SAP America, Inc. "xFusion fits very well with SAP Business One best practices, enabling more ways to access and exchange data across the enterprise."

Easier Data Exchange with SAP Business One

Exchange data with other business applications like HR, POS, and many others.

Automate Processes

Create scheduled tasks and streamline operations. See the xFusion Developers Network www.xfusiondn.com

Data Synchronization

Synchronize data across multiple departments and geographic locations. Create scheduled or automated processes to keep records up-to-date.

Improved Reporting

Facilitates data collection from a variety of business sources, and incorporates MS Reporting Services within the software architecture. Schedule ongoing reporting for management or departmental customers. xFusion improves business analysis and decision-making.

Enhance Data Quality

xFusion provides data profiling and transformation tools to help both IT and business professionals improve the value of existing ERP, CRM, and other business data.

xFusion Studio Benefits

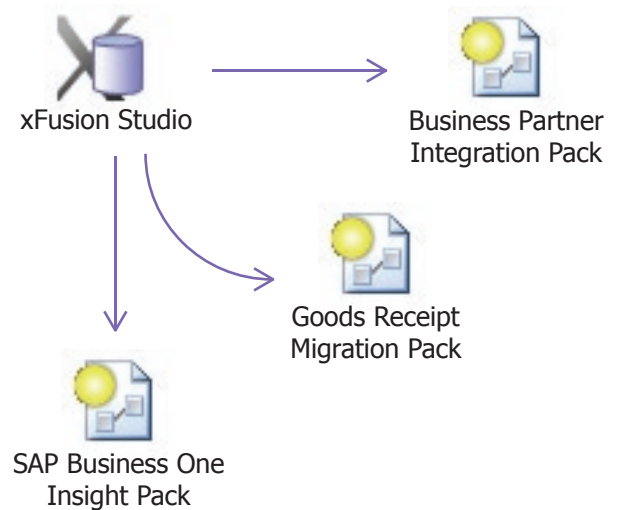

- Improve business productivity and knowledge
- Fast access to data from a wide variety of systems
- Gain a more accurate view of your business
- Reduce operational costs through automation
- Improve business visibility and intelligence
