

xFUSION STUDIO

Automate processes.

Improve data access.

Mobilize information.

xFusion Studio software provides an easier method for SAP customers to automate manual processes, and synchronize data with non-SAP systems.

SAP customers are creating better data integration processes with xFusion Studio. Projects that benefit from xFusion Studio include data management and automation, synchronizing data across systems, and moving data to and from websites and portals to improve information access.

Moving data in and out of SAP is simplified with xFusion as it works well with SAP data transfer utilities including LSMW, ADM, and e-CATT.

Automate Processes

- Reduce manual data administration tasks
- Exchange data between your websites, portals, and SAP system
- Reduce data processing steps
- Improve the processing and tracking of customer orders
- Import historical transactional and business data
- Increase productivity without additional headcount
- Streamline data processes including ordering, processing, inventory, and shipping processes

Synchronize Data

- Share order information between order processing, accounting, and inventory departments
- Reduce the manual re-entry of data
- Keep records current and improve or retain its value

Mobilize Information

- Move data from the SAP system to the web
- Improve the visibility of data by moving it to the end-user in a variety of formats
- Build and monitor Key Performance Indicators (KPIs) across any scope of data
- Quickly find important data from multiple locations and systems

SAP Customer Success

“xFusion Studio helped us automate bulk pricing uploads to SAP,” said R.Mishler, Vice President of Operations for Materials Handling Equipment Corp. “We have reduced the process from weeks to hours with xFusion.”

xFusion Studio Benefits

- Improve business productivity and knowledge
- Fast access to data from a wide variety of systems
- Mobilize your business data to the web
- Reduce operational costs through automation
- Improve data visibility and intelligence

Easier Data Exchange with SAP

xFusion Studio meets the demand of a rapid-deployment operation as users are quickly trained and productive in less than a week. xFusion Studio is best known for its data transformation and conversion strengths which is why more SAP customers choose it to build and deploy important data management projects.

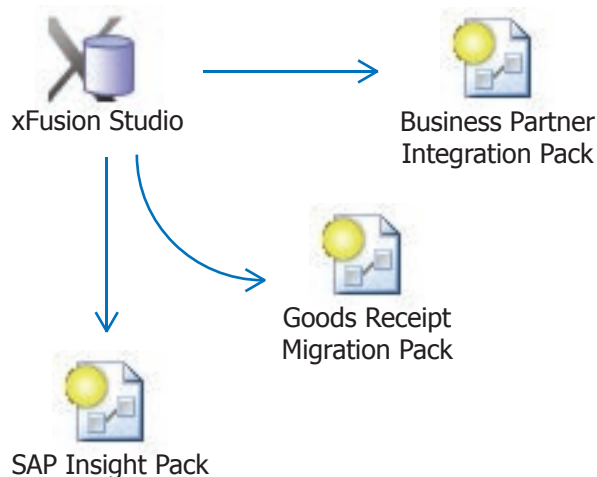

Data integration is a powerful part of the xFusion Studio platform. Its data management templates for integration processes deliver out-of-the-box productivity. These help SAP users to build specific processes for moving data across business applications, and are completely customizable.

Gain fast access to the right data, reduce operational bottlenecks, and automate manual processes with the xFusion Studio software utility.

xFusion Studio is the right solution for SAP Business Suite and SAP All-In-One users.

Better Data Quality

xFusion Studio provides data profiling and transformation tools to help both IT and business professionals improve the value of existing ERP, CRM, and other business data.

Connect to virtually any system
